

Composites

Composite working releases dust and fibres. These are small enough to enter human lungs and can penetrate the skin causing allergic reactions. The most efficient way to minimise the risks is to extract the substances directly at the source. Nederman is the leading supplier with extensive experience of designing and installing safe and efficient systems to composite working industries all over the world.

Nederman systems and solutions:

- Dust extraction systems
- Reels for media supply
- Cleaning systems for vehicles and premises
- Welding fume extraction/filtration

Quick find:

	EX extraction arms.....	46
	Mobile extraction/filter units	60
	Central high vacuum systems	65
	Cutting, grinding, sanding On-tool extraction	65
	Vacuum cleaning systems	65
	Mobile vacuum cleaning units	72
	Reels for different medias	78

All the above products and systems are not presented in this catalogue. For further information contact your Nederman sales representative. Also see the Nederman Design & Engineering Guide and www.nederman.com
