

# Shipping, Yards and Offshore

Water, oil, sludge, mud, scale rags, rust, sand, etc. Our powerful vacuum units can virtually collect and transport anything that can flow through the hoses. Therefore, the vacuum units are widely used for cleaning jobs in engine rooms, blacksmith workshops, hull buildings halls, on deck and in machines etc. Special units are also designed for stripping and cleaning of tanks, offshore and onshore in petrochemical industries. Our programme comprises both electric powered and air powered vacuum units, mobile and stationary. The air powered ejector units are available in a range of explosion safe models approved from Veritas/Nemko.

## Nederman systems and solutions:

### Shipping

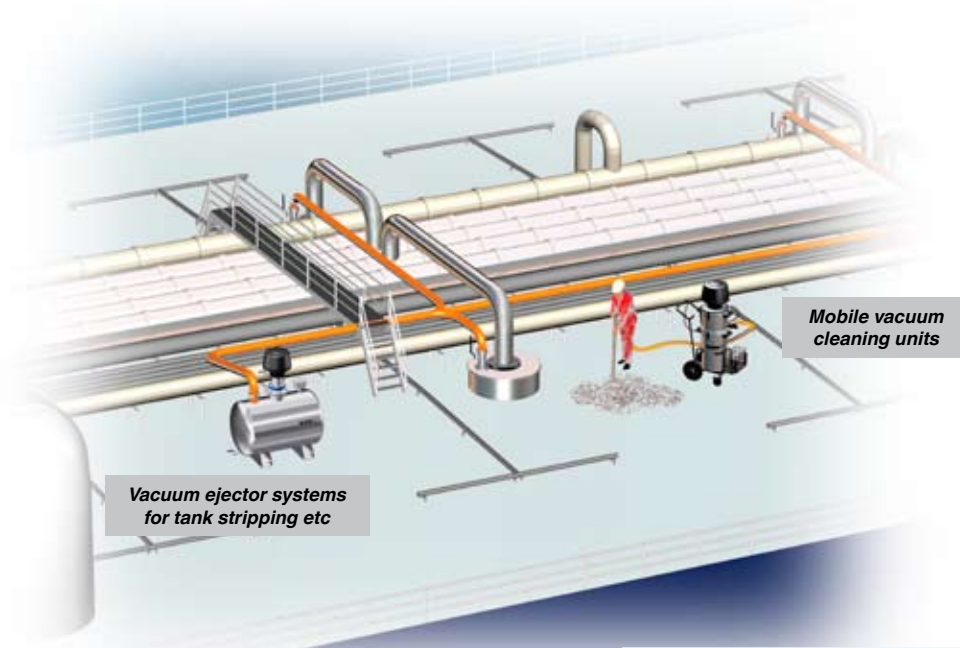

- Engine room and deck cleaning
- Tank stripping

### Yards

- Cleaning operations in workshops, hull building halls
- Machine cleaning
